Yash Solutions announces Red Hat Technologies as a Technology Partner.

YashOne is a Red Hat certified technology that is an AI powered event-trigger based integration platform which can run on-premise. It allows IT operations to create feedback loops, integrate multiple tools to create workflows, aggregate and view relevant information on dashboards and also orchestrate using our AI bot that can be trained to take actions on your behalf. YashOne brings automated infrastructure management and self healing features to the enterprises.

CTO Ashish Nanotkar said "Being a Red Hat certified technology and a business partner allows us to bring the power to our customers and also deepen our integration with products like Ansible, OpenShift and OpenStack." and John Annarelli the Managing Director of Yash Solutions promoted the partnership saying "We are extremely excited about the automation possibilities that we can bring to clients with our ISV & Red Hat Certified Container Technology."

Yash Solutions has been in business for 19 years. The past 5 years we have been in development on YashOne leveraging our knowledge in DevOps. With our new Red Hat Containerized Solution we are deepening our core DevOps practice with more brand awareness and will be able to offer more solutions to clients while partnering with Red Hat in multiple ways.
